## 1. Preamble

Traditionally, institutions, as well as individuals, have exercised self-regulation based on shared ethical principles and commonly accepted practices, when it comes to responsible and ethical research behaviour. However, in response to a rising number of cases of questionable research practices, it becomes imperative for the Higher Education Institutions (HEI) to frame a policy regarding promotion of academic integrity and prevention of plagiarism. The policy helps in two ways; at the first level, it guides the researchers for conducting research in a responsible manner, and second, it controls the behaviour of researchers, whenever they deviate from standard norms followed in the research. Ethical conduct in research, not only satisfies a scientific moral code but also leads to improved scientific results because the adherence ensures more attention to the details of scientific research including analytical techniques and more thoughtful collaboration among investigators. Also, the credibility of science with the general public depends on the maintenance of the highest ethical standards in research.

At Symbiosis International (Deemed University), it is ensured that research is conducted in a responsible manner. In this regard, the University has constituted an Independent Ethics Committee (IEC), which looks after responsible conduct of experiments on animals, clinical trials on human and other research related activities influencing the humans (Annexure 1.B.5 of Research Manual). This policy will provide the insights on Responsible Conduct of Research (RCR) and help the researchers to avoid departures from accepted ethical research practices and prevent those most serious deviations that constitute research misconduct.
